Code Summary Window

**Code Summary** window has been implemented in ShipWeight 11.62 and can be opened from ShipWeight Main window -> Codes area -> right click on any of the existing codes and select ‘View Summary...’.
The Code Summary window contains two main parts: an overview (left) and a detail view (right).

By right-clicking in the Overview/Detail view area, the user has the possibility to select the following options:

- Expand/Collapse All
- Copy
- Print

In addition, the Detail view area offers the ‘Show Fields...’ option (possibility to select what fields are shown in the item tree: quantities, custom codes).
By double-clicking item in ‘ItemNo’ column, the user can open Items dialog:
Several changes have been made to the **Items dialog**:

- The Toolbar area has been refreshed
- New listbox in the Toolbar area for selection of predefined filters
- Yellow highlighted area showing that the item table is filtered
- ‘Hide Column’ option added when right-clicking in the Table View area
- In the lower left corner of the item window, there is a read only field specifying how many items totally in the table
- Possible to define CG by put in a ‘/’ or ‘1/3’
- Renumber function for items can be accessed from the Tools menu -> Renumber Item Code…
**Project Info Window**

The **Project Info** window has been updated and now includes: one General tab for the main information and one Additional tab for extra information:

![Project Info Window](image)

ShipWeight Data File Import and Export Dialog

ShipWeight 11.62 comes with a completely refreshed **Data File Import and Export** window:

Changes and new features have been made/added to the Import and Export Tabs:

- Can now read from documents opened in Excel
- Added deduction item to keep total weight and center of gravity unchanged after import
• Added import of All sheets in Excel file (.XLSX); same mapping for each sheet

• Option to get units from project automatically
- Status box for current import settings

- Added import of ShipWeight project from XML file
- Implemented export to flat file (no headers written to file, need to set ‘Number of header rows’ to zero ‘0’ when importing these files

- Options to export negative numbers with red color (dynamic), and add a calculated weight column (dynamic) to excel file
- Added using one sheet per weight group for export to Excel (.XLSL)

- Export weight group hierarchy from ShipWeight to xml

- Getting number of decimals for quantities and CG from ShipWeight database
