BOOTH # 02-2005 - ZUIDHALL

Design Systems & Technologies is a fully owned, limited company, representing a number of marine / naval software houses in Europe, Russia and the C.E.I., the Middle East, parts of Asia, and parts of Africa.

DS&T operate principally in the fields of Ship Design, Building, Repair & Maintenance (the ship's life cycle) and Operation, and recently expanded into the offshore industry and graphical visualisation of large CAD models. Part of an international group, DS&T offers software and services in various, marine related, disciplines.

Founded in 1986, DS&T grew rapidly and expanded from an engineering design concern to include the on-going development and integration of specialised software. Today, the software library offered by DS&T includes about 20 selected titles ranging the full spectrum of Ship Design, Building, Repair, Maintenance (life cycle) and Operation. Into the 16th year of a successful software marketing activity, the DS&T customer base counts well over 400 sites and over 1000 software seats installed in Europe alone, several thousand world-wide.

On-going proof of the quality of software and technical services offered by DS&T, a majority of our customers maintain a software renewal and tech-support subscription, and well over 50% have purchased several software titles from us.

All software offered by DS&T run on PCs. The software titles are (in alphabetical order, new releases first):

- **Expander** : surface expansion plug-in for Rhino3D v3, by Albacore Research Ltd
- **Penguin** : artistic rendering (non-photorealistic) plug-in for Rhino3D v3 and AutoCAD, by McNeel & Associates
- **ShipConstructor 2004** : 3D solid product modelling for shipbuilding, by Albacore Research, Ltd.
- **ShipConstructor HVAC and Penetrations** : new modules in the ShipConstructor suite, by Albacore Research Ltd.
- **Freedom** : free viewer, reads NavisWorks files, by LightWorks Design Ltd
- **Navigator** : NavisWorks packaged as a plug-in for AutoCAD, by LightWorks Design Ltd
- **SwiftTrial** : sea-trial data acquisition and analysis, by HydroComp Inc.

- **AccuRender** : rendering for AutoCAD with radiosity, raytracing, etc., by McNeel & Associates, Inc.
- **AutoCAD** : worldwide recognised CAD system, by Autodesk
- **EstiMATE** : estimation and management of shipbuilding costs, by SPAR Associates, Inc.
- **FastShip / FastYacht** : hull modelling and fairing software, by Proteus Engineering
- **Flamingo** : rendering and animation for Rhino3D, by McNeel & Associates, Inc.
- **GHS**: hydrostatics and stability software, by Creative Systems, Inc.
- **GHS-LM**: load monitor on-board stability, by Creative Systems, Inc.
- **NavCad** : resistance & propulsion software, by HydroComp, Inc.
- **MAESTRO** : ship structural analysis, evaluation & optimisation software, by OSD, Inc. and Proteus Engineering
- **MidShip Section Calculator** : calculation of ship sectional properties in a CAD-like environment, by VSW, Inc.
- **NavisWorks** : navigation and collaborative reviewing of large multi-source CAD models, by LightWorks Design Ltd.
- **Perception**: yard management and project management software, by SPAR Associates, Inc.
- **PHASER** : hydrostatics and stability plug-in for Rhino3D, by Proteus Engineering
- **PropCad** : propeller modelling software, by HydroComp, Inc.
- **PropExpert** : propeller selection (re-powering, re-propelling), by HydroComp, Inc.
- **Rhino3D** : surface modelling software, by McNeel & Associates, Inc.
- **ShipConstructor 2004** (ShipCAM, Structure, Outfitting, Piping, HVAC, Penetrations, Manual & Automatic Nesting, Profile Nesting, ShipReport, NCPyros) : ship production, database-integrated, 3D solid product modelling & NC cutting software, by Albacore Research, Ltd.
- **ShipMO** : ship motions calculation, simulation and visualisation software, by Sable Maritime, Ltd.
- **ShipWeight** : parametric, database oriented weight estimation software, by BAS Engineering AS
- **Slicer**: Cuts cross-sections through your Rhino3D model, by Proteus Engineering
- **SwiftCraft**: speed and power prediction of monohull vessels under 75m, by HydroComp, Inc.
- **Trident** : ship specific advanced finite element analysis software, by Martec Ltd
- **Visual SMP** : ship motions calculation, simulation and visualisation software, by Proteus Engineering

At **DS&T** we believe that the problem should drive the solution and that communication is the bridge between what is perceived to be possible (**the idea**) and its practical achievement (**the product**). Thus, **communication** is a central element of our everyday activity. Our written documents, training courses, tech-support services and project presentations are focused on making the information being transmitted to the end-user easy to understand, and immediately applicable and exploitable.

Details on on-going projects are available upon request. You are also invited to visit our web site
